

AJACE AI

EchoMind

The private AI assistant that can sit in the room.

Answers from your own documents. Listens to your meetings. Speaks when spoken to. Runs entirely on one machine you own — with the network cable unplugged.

On-premises

Internal / Confidential

AI stopped at the office door

The organizations with the most to gain from AI are the ones least able to use it.

Confidential work is off-limits

Legal, clinical, financial and government teams cannot paste real material into a cloud chatbot. So the AI everyone talks about is used for drafting emails, not for the work that matters.

Knowledge is scattered and silent

Policies sit in one system, contracts in another — and the most valuable context of all, what was actually said in a meeting, is never written down.

Generic AI invents answers

A confident, unsourced answer is not a smaller version of a correct one. In a regulated workflow it is a liability.

Expertise cannot be everywhere

One compliance officer, one senior partner, one experienced clinician cannot sit in every room at once.

The result: the more sensitive and valuable your knowledge, the less AI you are allowed to use on it.

Bring the AI to the data — not the data to the AI

EchoMind is a complete AI assistant on a single appliance inside the customer's own walls.

Reads your documents

Upload policies, contracts, manuals. Ask in plain language. Every answer cites its source — document, section and page.

Hears your meetings

Live transcription with a background check against your own policy, flagging what is unsupported or non-compliant as it is said.

Talks with you

A real spoken conversation — responds in about half a second and stops the moment you interrupt.

Writes your documents

Turns a brief into a finished PDF or PowerPoint in your template — minutes, memos, reports, decks.

Keeps tenants apart

One box can serve legal, clinical and finance teams with knowledge that cannot cross between them.

Never phones home

No cloud, no third-party processor, no training on your data. It works with the cable unplugged.

An assistant that can stay in the room

Because it runs on-premises and speaks naturally, EchoMind is not confined to a browser tab. It can be installed where the work actually happens.

IN THE MEETING ROOM

A permanent participant

- hears the whole discussion
- flags a wrong statement live
- writes the minutes and actions

ON THE DESK

A personal assistant

- answers from the case or chart
- drafts the document
- never sends data outside

AT THE FRONT LINE

A support co-pilot

- listens to the customer call
- surfaces the right answer
- checks what was promised

IN THE FIELD

An offline expert

- works with no connectivity
- hands-free voice
- full manual library on board

What makes this possible

No cloud dependency

it can live in a locked room or a vehicle

Speaks and listens

it works without a keyboard, hands-free

Knows when to speak

silent by default; surfaces only high-confidence findings

Separated knowledge

the room's tenant sees only the room's content

The Lawyer

Private legal associate — on the desk and in the client meeting.

WHO

Partners, associates and in-house counsel working across contracts, regulation, precedent and privileged client material.

WHAT SLOWS THEM DOWN TODAY

- Re-reading the same agreements to find one clause
- Precedent buried across matters nobody can search
- Public AI tools forbidden — privilege and confidentiality
- Client calls where a commitment is made and never recorded

WHAT ECHOMIND DOES

- Ask across the whole contract library and get the clause, with the document, section and page
- Contract-review memos drafted to the firm's template
- Client meetings transcribed, with commitments and deadlines extracted
- Live flagging of one-sided, missing or risky clauses against the firm's playbook

THE MOMENT IT EARNS ITS KEEP

Mid-negotiation, counsel asks what the liability cap was in the 2023 agreement — and gets the clause and page in seconds, without the file leaving the building.

"It reads every contract we have ever signed, and it can tell me where it got the answer."

The Doctor

Clinical assistant — at the desk, at the bedside, hands-free.

WHO

Physicians, nurses and clinical governance teams working under protocol, with PHI that cannot leave the institution.

WHAT SLOWS THEM DOWN TODAY

- Guidelines change; recalling the current one takes time
- Documentation eats the evening
- PHI rules out every cloud AI service
- A drug interaction or contraindication can be missed under pressure

WHAT ECHOMIND DOES

- Ask protocols and formulary in plain language, with the source shown
- Hands-free voice for use while examining or scrubbed in
- Consultations transcribed and turned into a structured visit note
- Live flagging of interactions, contraindications and dosing against the reference set

THE MOMENT IT EARNS ITS KEEP

During a consultation the assistant quietly flags that the proposed medication interacts with the patient's existing prescription — while the patient is still in the room.

"It is documentation support and a second pair of eyes — and the data never leaves the hospital."

The Manager

Meeting facilitator — a permanent participant in the room.

WHO

Executives, chiefs of staff, PMO and operations leaders who live in meetings and own the follow-through.

WHAT SLOWS THEM DOWN TODAY

- Decisions are made and then disputed a month later
- Minutes are somebody's evening job, and arrive late
- Actions have no owner and no due date
- Nobody can search what was said last quarter

WHAT ECHOMIND DOES

- Sits in the room and transcribes the whole discussion
- Separates speakers and produces an analyzed report
- Extracts decisions, commitments and action items with owners
- Flags anything said that contradicts company policy
- Makes every past meeting searchable alongside documents

THE MOMENT IT EARNS ITS KEEP

Someone asks what was agreed about the vendor in March. The answer comes back with the sentence, the speaker and the date — and the discussion moves on.

"Minutes stop being a chore, and last quarter stops being a black hole."

The Support Agent

Customer care co-pilot — on the call, in real time.

WHO

Contact-center and customer-care teams answering product, policy, billing and warranty questions at speed.

WHAT SLOWS THEM DOWN TODAY

- New agents take months to learn the product
- Answers vary between agents — and some are wrong
- Hold time while the agent searches a wiki
- Promises made on calls that policy does not support

WHAT ECHOMIND DOES

- Listens to the live call and surfaces the right answer from the real policy
- Every answer cited, so the agent can quote with confidence
- Flags a promise that contradicts warranty or pricing policy as it is made
- Produces the call summary and follow-up automatically
- Customer data never leaves the contact center

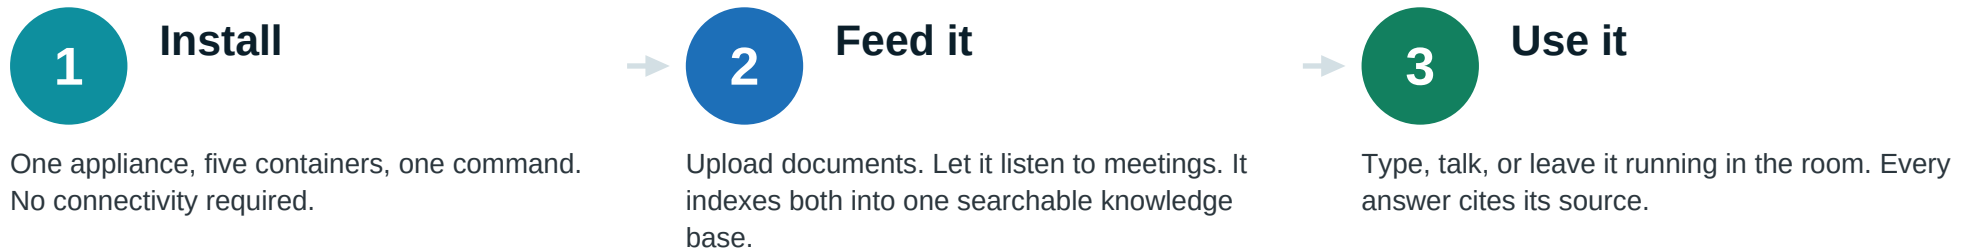

THE MOMENT IT EARNS ITS KEEP

A new agent is asked an obscure warranty question. The correct answer, with the clause behind it, appears before the customer finishes the sentence.

"A first-week agent answers like a five-year veteran — and we can prove what was said."

Three steps, then it just works

No integration project, no data migration, no cloud account.

Under the hood — for the technical buyer

- **Hybrid retrieval**

Meaning search and exact-keyword search run together, then a second model re-reads the best passages against the question.

- **Honest refusal**

If nothing relevant clears the gate, it says the answer is not in the documents rather than guessing.

- **Grounded generation**

The answer model sees only the retrieved evidence, fenced as data — so a document cannot give it instructions.

- **Isolation in the query**

The tenant check runs inside the search itself, so another tenant's content never enters the ranking.

Measured, not claimed

An instrumented evaluation of this system has been accepted for publication at an international peer-reviewed conference (QASC 2026).

0.98

citation precision

78%

correct refusals on
unanswerable questions

0 / 50

cross-tenant leaks

0.6 s

to first spoken response

2×

reduction in prompt-injection
success

WHAT WE PROVED

- Answers point at the right source, and it refuses when it should.
- Tenant isolation held on every retrieval path audited.
- A structural defense halved prompt-injection success versus merely instructing the model.
- The dual-loop design is faster AND safer — removing the safety rule produced ungrounded claims on every turn.

WHAT WE OPENLY REPORT AS OPEN

- Response timing can still reveal that a restricted document exists.
- Blocked injection attempts are contained but not yet surfaced to the operator.
- Human-panel evaluation of answer quality is not yet complete.

Publishing the limitations is the point. Technical buyers verify claims — and almost no vendor in this category has any.

Why EchoMind wins

Every alternative forces a trade-off between capability and control. We remove it.

	Runs offline	Cites sources	Refuses when unsure	Live meeting check	Tenant isolation
Public AI chatbots	No	No	No	No	No
Cloud enterprise AI	No	Partial	Partial	No	Partial
Enterprise search	Yes	Links only	n/a	No	Partial
Meeting transcription	No	No	n/a	Transcript only	No
EchoMind	Yes	Yes	Yes	Yes	Yes, in-query

And one more thing nobody else has

A peer-reviewed measurement of the architecture, with the limitations published. In a market of unverifiable claims, evidence is the differentiator.

How it is sold and deployed

One platform, five packaged products, four deployment shapes.

PACKAGED PRODUCTS

EchoMind Health	hospitals, clinics, clinical governance
EchoMind Law	firms and in-house legal teams
EchoMind Bank	advice, compliance, KYC/AML
EchoMind Meeting Rooms	boards, PMO, operations
EchoMind Retail	stores, sales floors, customer care

DEPLOYMENT SHAPES

On-premises	the standard sale — an appliance in their rack
Edge / field	remote sites, clinics, vehicles, vessels
Private cloud	their own controlled tenancy
Air-gapped	defense, government, critical infrastructure

COMMERCIAL SHAPE

Owned hardware

One appliance per deployment. No per-token cost that grows with usage.

No processor agreement

Nothing is sub-processed, so the procurement path is dramatically shorter.

Expansion

More departments = more tenants on the same box; more sites = more boxes.

Services

Vertical content packs, template customization, and integration work.

Where it goes next

SHIPPING TODAY

- Knowledge Chat, Live Transcript, Silent Assistant, Voice, Document Studio, Boardroom
- Five vertical products with enforced tenant isolation
- Secure Export Gateway; role-based access and audit

NEXT

- Surface blocked injection attempts to the operator
- Constant-time responses to close the timing channel
- Human-panel evaluation and larger-corpus scale study
- Deeper meeting-room hardware integration

The ask

Give us one room, one department, and one week.

Bring your own documents. We install, index, and demonstrate on your content — then unplug the network cable and run the whole demo again.
